## Carlos Moving to Cranbrook Office!

Berry Architecture is pleased to announce that Carlos Gamez Ruiz is relocating to Cranbrook to manage this office. He will be the Architect in Charge and will work with Cody Lyzenga to keep our BC projects running smoothly. We have many projects on the go in Cranbrook, Kimberley, and the East Kootenay region as a whole, so it was time to expand our presence in the area. We are still located at Ground Floor, 131 7th Avenue South, and George and Isaac will continue to support the Cranbrook office. Carlos will also be providing his skills as a Building Envelope Specialist to the region. Good luck in this exciting new venture!

## Berry Architecture Silver Sponsor of Olds College Event

Olds College hosted a live-streaming fundraising event on April 9. It was a “Celebration of Alberta Ag,” as the College toasted Alberta’s agriculture industry and their role in it. The event replaced the College’s annual fundraising event, the Homestead Feast, which was cancelled due to COVID.

Berry Architecture was a Silver Sponsor of the event. We have completed many renovation projects and facility upgrades for the College which help to further their goals of providing cutting-edge technologies and innovative research opportunities to students in the industry.

## Purcell Collegiate Project Update

Construction on the new Grade 7-12 International Boarding School, Purcell Collegiate, is set to begin this fall. We are very excited to see this project entering the next stage. The target is for completion in the summer of 2023 with plans in the works for a two-month summer sports program in July and August of 2023 to kick things off. The school is anticipating full enrollment and opening in September, 2023. This project in Kimberley, BC will be a boon for the region and promises educational enrichment and facility partnerships for Kimberley, Cranbrook, and area.

## New Project: BevCanna Bottling Plant

We are utilizing our processing and manufacturing facility experience to support BevCanna Enterprises in a unique bottling plant project in Bridesville, BC. BevCanna is a diversified health and wellness beverage and natural products company. In addition to developing and manufacturing a range of plant-based and CBD-infused beverages, Bevcanna also owns and operates Trace Wellness—a health-focused brand that sources its naturally alkaline spring water from the company’s proprietary aquifer in Bridesville. With BAA’s assistance, this plant will soon be in full production.
