Project Completion: Acuity Engineering

This new project for Acuity Engineering is a mixed use building in Edmonton, AB. It consists of a new office suite for the electrical engineering firm on the main floor and six one-bedroom apartments, three per floor, on the remaining two floors. The office portion has reception areas, two offices, a boardroom, kitchen, and service spaces. On the second and third floors, two of the six apartments include a den and additional powder room. There is a roof top patio on the second floor of the residential portion of the building, as well as two private balconies for the southwest apartments. There will also be an outdoor amenity space by the northwest rear entrance for staff and tenants alike to enjoy.

Purcell Collegiate Open House

Purcell Collegiate held an Open House on July 19 for the new International Gr. 7-12 school on its new site at the Kimberley Golf Course. Berry Architecture designed the complex that will include the boarding school, dormitories, and high level sports fields. Construction is to begin immediately following this golfing season. Don't worry, golfers, the current holes that will house the new school are being re-located on the golf course site!

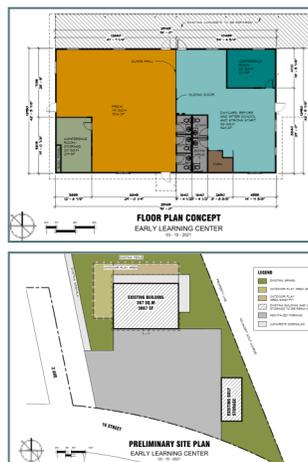

RDPSD IMR Projects

Berry Architecture has been completing IMR projects for Red Deer Public School District under a three-year contract since 2019. To date, we have completed over 30 such projects—a couple of examples are the renovation of the HHHS Fabrication Shop and the complete building envelope renovation of the LTCHS tower block. We so enjoy working with RDPSD and have completed projects in all of their facilities since beginning this working relationship in 2000.

Fernie Early Learning Centre Reno

School District #5 (Southeast Kootenay) was seeking to improve the function of their Early Learning Centre in Fernie, BC. Berry Architecture reconfigured the building's interior to provide much more space for the Strong Start program and Bright Beginnings Daycare and also to improve life safety and barrier-free accessibility. There will be electrical and mechanical upgrades, as well as new flooring and exterior siding. Design Development is complete, and the project is moving into Construction Documents. We're excited to be completing another project with S.D. #5.
